Charging: Ensure you use the correct voltage charger when charging your battery. The 60v Batteries have the same pin layout as a stock 60v Battery. The 72V Batteries use a 4-pin layout with (+) on pin 1 and (-) on pin 2.

BMS Wake Up: If your battery is not responding, hold this button down to wake up your BMS

Discharge Power Leads: Ensure you always have your circuit breaker turned off before plugging battery power leads into the power cable on your bike.

Battery Cover Extension Clip: This is used to replace the stock clip to allow for a slightly taller battery. Stored in the foam packing in your battery box.
